

	S1 sense	S2 geom. est.	S3 channel est.	S4 optimise	S5 control tx	S6 electronic update	S7 mechanical morphing	S8 settling	S9 calibration	S10 stabilised RF
A1 theoretical FIM [1], [2], [3], [15]			S·T	S		A	A			A
A3 flexible programmable aperture [6] (geometry imposed)	Q·T	Q·(T)		Q·T	Q·(T)	Q·T			D	Q·T*
A5 rigid reconfigurable RIS [4], [5]					Q·(T)	Q·T				Q
A4 self-morphing mechanical [7], [8] (no RF layer)	Q·T	Q·T		Q·T	Q·T		Q·T	Q·T		
A7 flexible active array [20]	D	D		D	D	D			D	Q

across the reviewed set, these four stages are timed only on platforms with no RF layer (S7, S8), not timed at all (S9), or timed only with the geometry held static (S10)

·T fully delimited: a duration with identifiable start AND end events, separable from its neighbours
·(T) partially delimited: a share of an aggregate interval, a rate factor, a residual, or a chosen wait
* geometry held static throughout the timed interval

■ Q quantitatively measured ■ A / S assumed or simulated
■ D demonstrated, no quantity ■ absent / not applicable
