

system-model assumption**link
G1****closest evidence in the reviewed set**

geometry freely selectable
within a morphing range

commanded shape control
[7], [8] — no RF layer

morphing instantaneous, or
within one coherence block

≈ 300 ms surface morph
[8] — bare elastomer

computed shape stays usable
irrespective of delay / Doppler

nothing — no bound, no
condition, no experiment

mapping re-established
whenever needed

closed-loop refocusing
[20] — not timed

radiation trustworthy as
soon as the shape is set

16.7 ms to stabilised RF
[6] — geometry static

command transport and
electronic update are free

≈ 5.5 ms of 16.76 ms; $\times \frac{1}{4}$
multiplexing — measured

Dashed links are unsupported by a measurement on a comparable object: architecture mismatch (red), operation demonstrated but untimed or measured from the wrong start event (amber). G1–G4 name the missing interval (Table 8).
